J) DATA SECURITY

All hard copy information should be kept in a locked office, filing cabinet, drawer, or safe.

Employees are aware of their roles and responsibilities when their role involves the processing of data. All employees are instructed to store files or written information of a confidential nature in a secure manner so that are only accessed by people who have a need and a right to access them and to ensure that screen locks are implemented on all PCs, laptops etc when unattended. No files or written information of a confidential nature are to be left where they can be read by unauthorised people.

Where data is computerised, it should be coded, encrypted or password protected both on a local hard drive and on a network drive that is regularly backed up. If a copy is kept

on removable storage media, that media must itself be kept in a locked filing cabinet, drawer, or safe.

Employees must always use the passwords provided to access the computer system and not abuse them by passing them on to people who should not have them.

Personal data relating to individuals should not be kept or transported on laptops, USB sticks, or similar devices, unless prior authorisation has been received. Where personal data is recorded on any such device it should be protected by:

- a) ensuring that data is recorded on such devices only where absolutely necessary.
- b) using an encrypted system — a folder should be created to store the files that need extra protection and all files created or moved to this folder should be automatically encrypted.
- c) ensuring that laptops or USB drives are not left where they can be stolen.

Failure to follow the Company's rules on data security may be dealt with via the Company's disciplinary procedure. Appropriate sanctions include dismissal with or without notice dependent on the severity of the failure.
